

LARGE-SIZE BAROGRAPH

Air pressure

The baron among the Barographs...

is scientifically tested and proven. The carefully aged set of nine capsules as measuring element and the wide drum with clockwork are protected by a plexi-glass dome. These precision parts guarantee a high resolution as well as exact documentation. All variants are usable in a wide application range. Depending on the location, four adjustable pressure measuring ranges (106.7 hPa each) are available. High flexibility concerning the location of measurement make the world-wide use of the Barograph possible.

- ▶ off the line and manipulation proof
- ▶ wider drum (160 mm), high resolution
- ▶ pressure measuring element with overload protection for transport to up to 2700 m altitude
- ▶ highly precise and application oriented

- classical meteorology
- weather services
- research and development
- calibration laboratories
