

Monnit

Wireless Pressure Sensor

Technical Overview

General Description

The Monnit wireless pressure sensor measures pressure from a 5 volt pressure transducer and transmits the pressure measurement to iMonnit. This solution combines a standard pressure transducer interfaced to a Monnit wireless radio.

Features

- Measure pressure with 50 or 300 PSIG transducers (others available upon request).
- Measure non-caustic liquid or vapor pressures.
- Pressure transducer is NEMA 4X (IP66), CE rated.
- Free iMonnit basic online wireless sensor monitoring and notification system to configure sensors, view data and set alerts via SMS text and email.

Principle of Operation:

By connecting the Monnit wireless pressure sensor to a pressurized gas, liquid or vapor supply line, it can measure the pressure within the line and send data to the iMonnit Online Sensor Monitoring and Notification System. The data is stored in the online system and can be reviewed and exported as a data sheet or graph. User customization allows you to set notifications and alerts from the system so you can know immediately if pressure is above or below an optimal range.

Power Options

The standard version of this sensor is powered by two replaceable 1.5 V AA sized batteries (included with purchase).

This sensor is also available with a line power option. The line powered version of this sensor has a barrel power connector allowing it to be powered by a standard 3.0 - 3.6 V power supply. The line powered version also uses two standard 1.5 V AA batteries as backup for uninterrupted operation in the event of line power outage.

Power options must be selected at time of purchase, as the internal hardware of the sensor must be changed to support the selected power requirements.

Monnit Sensor Core Specifications

- Power: Two replaceable 1.5 V AA batteries (Option for line power with battery backup)
- Communication: RF 900, 920, 868 and 433 MHz
- Dimensions: 4.375" x 2.470" x 1.111"
- Antenna: 4" wire antenna
- Operating Temperature: -7° to 60°C (20° to 140°F)
- Device Range: 250 - 300 ft. non-line-of-sight*
- Battery Life: At 1 hour heartbeat setting, AA batteries will last more than 4 years.**

* Actual range may vary depending on environment.
** Battery life is determined by sensor reporting frequency and other variables.

Example Interfacing

- Compressors/Compressed Air Lines
- Water Supply Lines
- Pumping Systems
- Irrigations System Pressure
- Industrial Process Monitoring
- Trash Compaction Equipment

The Leader in Low Cost Wireless Sensors

Monnit Wireless Sensor Technical Specifications

Supply Voltage	2.0 - 3.6 VDC (3.0 - 3.6 VDC Using Power Supply) *
Current Consumption	0.7 μ A (sleep mode) 2 mA (radio idle/off mode) 2 mA (measurement mode) 25 mA (radio RX mode) 35 mA (radio TX mode)
Operating Temperature Range**	Using Alkaline AA Batteries: -18°C to +55°C (0°F to +130°F) Using Lithium AA Batteries: -40°C to +85°C (-40°F to +185°F)
Certifications	 900 MHz product; FCC ID: ZTL- RFSC1 and IC: 9794A-RFSC1. 920 MHz product; ARIB STD-T108 R210-103733. 868 and 433 MHz product tested and found to comply with: CISPR 22:2008-09 / EN 55022:2010 - Class B and ETSI EN 300 220-2 V2.4.1 (2012-05).

Pressure Transducer Technical Specifications

Operating Temperature	0 to 175°F (-18 to 79°C).
Thermal Effect on Reading	\pm 0.02% FS/°F. (includes zero and span).
Media	Gas, Liquid or Vapor
Response Time	50 msec.
Stability	1.0% FS/year (Typ.).
Wire Length	1 Meter shielded cable (between gauge and wireless unit)
Accuracy	0.25% FS; 0.20% RSS; Absolute Ranges: 0.5% FS; 0.35% RSS. (Includes linearity, hysteresis, and repeatability).
Max Voltage Input	5.5 V
Voltage Measurement Range	0 - 5.2 V ***
Voltage Measurement Resolution	~3 mV
Voltage Measurement Accuracy	\pm 3% FS
Pressure Measurement Accuracy	\pm 3% FS
User Calibrated Pressure Accuracy	+/- 1% FS ****
Process Connection	1/4" NPT-Male Standard
Pressure Transducer(s)	50 or 300 PSIG (Others available upon request)

* Hardware cannot withstand negative voltage. Please take care when connecting a power device.

** At temperatures above 100°C, it is possible for the board circuitry to lose programmed memory.

*** The sensor is capable of measuring above 5 volts but may not meet the specified accuracy above this value.

**** For best results first zero the sensor then calibrate at greater than 20% maximum pressure of the transducer.
