

Model 6443

X-Y Force Sensor

DESCRIPTION

The X-Y force sensor is constructed of two strain gage bridges, mounted at 90°, isolated by a flexure system. The complete two-component system, including flexures, is machined from one specially prepared metal billet to provide unusual structure

strength and to minimize crosstalk between the two transducers. This unique sensor has excellent linearity characteristics and maximum structure life.

FEATURES

- Compact size
- 0.1 % linearity and hysteresis, respectively
- Simultaneous dual-axis readings
- Minimal crosstalk
