

Model QWLC-8M

Miniature Reaction Torque Transducer

DESCRIPTION

Model QWLC-8M miniature reaction torque transducer is engineered for minimum size and to achieve 0.1% maximum non-linearity. Four bonded strain gages are positioned on a special machined portion of the transducer to effectively measure even slight torque motion. These models operate and are calibrated

in both directions. A modular, stainless steel construction and no moving parts provide excellent durability under harsh industrial conditions. Potential miniature reaction torque transducer applications include motor dynamometer, tire braking, twist measurement, and friction-skid test measurements.

FEATURES

- 25 in-oz to 300 in-lbs
- 0.1 % non-linearity and hysteresis
- Compact size
- High frequency response
- Stainless steel construction
- Integral cable standard
